

CMMC + AI GOVERNANCE BUNDLE

systemsbuilder.pro + Stratify | The CUI boundary, and the AI running inside it

Your SSP governs the CUI boundary. Nothing in it governs the AI running inside that boundary.

Primes and agencies now ask both questions through the same flow-downs: is CUI protected in this system, and what AI runs in it, who owns it, and may it touch CUI? A CMMC program answers the first. It was never built to answer the second.

THE BOUNDARY: SYSTEMSBUILDER.PRO

- System Security Plan management, POA&M and gap tracking
- CMMC 2.0 and NIST SP 800-171 / 800-53 control implementation and evidence
- DFARS 252.204-7012, -7019, -7020, -7021 alignment and SPRS score tracking
- Incident response, continuous monitoring, and supplier and subcontractor flowdown risk
- ITAR / EAR classification and export workflows

THE MODELS INSIDE IT: STRATIFY

- AI use case inventory: every model, API, agent, and embedded feature, with an owner
- CUI boundary determination per model: may it touch CUI, and where does it run
- NIST AI RMF evidenced across all 72 subcategories; ISO/IEC 42001, ISO/IEC 23894, and EU AI Act from the same answers
- Explainable 0 to 100 risk scoring; hash-chained audit trail
- One-click evidence packet for a CO, prime, or auditor

WHAT LAYERED INTEL ADDS

- One system inventory, one boundary. We set up both products against the same list of systems, so the SSP in systemsbuilder.pro and the model inventory in Stratify describe the same environment and the answers agree.
- One evidence story. When a prime sends a cyber questionnaire and an AI questionnaire in the same week, you answer both from records that already match.
- Practitioners, not a help desk. The people who set it up have run federal captures and know what an evaluator or a prime's supply-chain team will ask for.

The two products are separate platforms; they are not integrated software. Layered Intel aligns them during setup and keeps them aligned.

WHO IT IS FOR

- Defense contractors and subcontractors that handle CUI and build, buy, or embed AI in what they deliver
- Companies receiving AI governance questions from a prime or in solicitation language, on top of CMMC
- Technology and software firms that want both answers ready before the next pursuit, not during it

STATUS AND ENGAGEMENT

Status	Both products are live: systemsbuilder.pro at systemsbuilder.pro, Stratify at stratify.layeredintel.com.
Engagement	Bundle subscription plus guided setup by Layered Intel. Terms on request.
Next Step	A 45-minute call. Bring your SSP and a list of the AI your team uses; we will show you where the two meet and where the gaps are.

ABOUT LAYERED INTEL

Who We Are	A Nevada small business built by federal practitioners - capture executives, retired military logisticians, and enterprise systems engineers whose careers were spent inside the Department of War, DHS, the Intelligence Community, and the federal systems integrator base. We turn a subject-matter expert's problem into working, deployed software in days.
Business Status	Small Business Self-Certified Small Disadvantaged Business Nontraditional Defense Contractor (10 U.S.C. 3014) SAM active for all awards
Identifiers	UEI C5UCQB8QTB8 CAGE 9TJW1 Primary NAICS 541611 Las Vegas, Nevada
