

SAMSON

Strategic Anti-trafficking Mission System Operations Network | Available Through Layered Intel

Trafficking cases fail on coordination, not on effort. The information that would close a case is almost always already held - by somebody else, in another system, on another jurisdiction's timeline. SAMSON puts intake, cases, people, places, and outside data in one operations picture, from the first call through recovery.

WHAT IT DOES

- Intake to case. Record new intakes and convert them to cases. Intake flags nearby risk data, such as registered sex offender locations.
- Case management. Assign cases and tasks across managers, analysts, operators, and administrators.
- Automatic entity capture. Every entry about a victim, trafficker, or family member is stored as an entity - people, places, objects, locations, and phones.
- Enrichment from notes. A license plate typed into a note is looked up automatically for its registered owner.
- Three kinds of report. An operations report for internal use; a case report for law enforcement; and a redacted case report that withholds victim names.
- Operations planning built from what the case already knows.

MAPS, LINKS, AND RECOVERY

- Maps. Everything tied to a location: drawn areas, person locations, crime data, and open-source layers.
- Link analysis within one case or across many - for example, everyone trafficked from one apartment complex in the last six months.
- Outside data. Open-source and licensed data sources connect by API; anything relevant by location, time, name, or business feeds the entity map and link analysis.
- Recovery. When a person is rescued, the case converts to recovery.

WHO IT IS FOR

- Federal, state, local, tribal, and territorial law-enforcement task forces working trafficking cases
- Interagency and multi-jurisdiction operations that must share information without sharing systems
- Non-governmental organizations and victim-services providers coordinating with law enforcement
- Integrators and primes who need an anti-trafficking capability inside a larger bid

STATUS AND ENGAGEMENT

Status	Final, working product. Available through Layered Intel as a value-added reseller, including white-label deployment under your own name.
Engagement	Value-added resale - licensed through Layered Intel, with setup and support White label - field it under your own name and branding Teaming - we bring SAMSON to your pursuit; you prime
Acquisition Path	Layered Intel is a nontraditional defense contractor (10 U.S.C. 3014) and a Self-Certified Small Disadvantaged Business. Available through commercial license, subcontract or teaming arrangement, prototype Other Transaction, or Commercial Solutions Opening.
Next Step	A 45-minute call with your mission owner. We will show the working system and scope what it would take to field it for your jurisdiction.

ABOUT LAYERED INTEL

Who We Are	A Nevada small business built by federal practitioners - capture executives, retired military logisticians, and enterprise systems engineers whose careers were spent inside the Department of War, DHS, the Intelligence Community, and the federal systems integrator base. We turn a subject-matter expert's problem into working, deployed software in days.
